## Adding and Subtracting Polynomials

Objective: **I CAN . . .** Add and subtract polynomials.

Unit 7 Lesson 1

**Remember:** When we add or subtract, we can only add or subtract "like terms"

**Adding Polynomials:** Combine like terms.

1.  $(-5x - 2) + (-x + 6)$

2.  $(6x^2 - x + 3) + (-2x + x^2 - 7)$

3.  $(-8x^3 + x - 9x^2 + 2) + (8x^2 - 2x + 4) + (4x^2 - 1 - 3x^3)$

**Subtracting Polynomials:** Distribute the (-), then combine like terms.

4.  $(-6x^3 + 5x - 3) - (2x^3 + 4x^2 - 3x + 1)$

5.  $(4x^2 - 1) - (3x - 2x^2)$

6.  $(12x - 8x^2 + 6) - (-8x^2 - 3x + 4)$

## Lesson 7.7

### Evaluating Square Root Functions

To evaluate a square root function at a value of  $x$ , substitute that value into the function everywhere that  $x$  occurs.

Example : For each function, find the indicated function value.

$$7) f(x) = \sqrt{2x+5}, f(2)$$

$$8) g(x) = \sqrt{x+13} \text{ when } g(-4)$$

### Square Root Function 5

Because the square root of a negative number is not a real number, the square root function is defined only for values of the independent variable that produce a nonnegative radicand.

Evaluate all of the functions when  $x=15$ .

$$9) j(x) = \sqrt{2x-5}$$

$$10) k(x) = \sqrt{5x-11}$$

$$11) m(x) = \sqrt{6+2x}$$
